

Deltek WelcomHome™

Web-Based Project Collaboration Solution

DELTEK WELCOMHOME HELPS YOU:

- Centralize all project information for all team members to access from one application
- Monitor progress and project health using the dashboard and variance indicators
- Control projects with real-time status information and issue management
- Manage work outside your schedule with the Item Manager
- Share information, documents and ideas over the internet on your company's intranet

Deltek WelcomHome™ improves your organization's project performance by allowing all project participants—from executives and project managers to remote teams and contractors—to access project information through a simple web-based interface. You determine users' access, while data from disparate systems is centrally accessed in real-time. Live schedule views, document management and item management tools give you superior control over project collaboration and progress.

THE DELTEK WELCOMHOME™ ADVANTAGE

Live Access to Multiple Project Sources — Provides a customizable portal that improves your organization's project performance by allowing all participants access to project information through a simple web-based interface. WelcomHome's interactive schedule views, document and item management provide managers greater control and oversight over the entire project lifecycle. Digital dashboards and project health views provide executives with up-to-date metrics.

Figure 1: Monitor progress and project health using Deltek WelcomHome's dashboard and variance indicators

Point of Integration — Provides a user-friendly web-based, environment in which your employees can collaborate and share information. WelcomHome enhances team productivity, shares information between disparate project management systems and improves decision-making so projects complete on time and within budget.

Improve Collaboration Between Remote Team Members — Provides the collaboration features to better manage the project management office, regardless of location. Documents, action items, notices and schedules are easily shared via the web.

Live Access to Multiple Project Sources — A “schedule aware” project portal provides simultaneous live access to multiple project tools such as Deltek Open Plan™, Deltek Cobra™ and Deltek WelcomRisk™, Microsoft® Project and Primavera® P3. Additional live views can be created to present any corporate data, eliminating SILOS of information that delay project delivery and increase costs.

Share Project Information — Shares information throughout the enterprise and beyond with client, suppliers and other stakeholders. Data is easily filtered to meet the needs of the end user. Data Views are automatically configured based on the role a user has on a project.

Increase Project Visibility Through All Levels of the Organizational Hierarchy — Presents live data in graphically-based, filtered dashboard views so users can focus on areas that need immediate attention.

“I don’t know how we would manage all of these (requests for) proposals without the WelcomHome portal,”

- Thea Yancey, Sperry Marine

KEY FEATURES AND BENEFITS

Custom Screens — DataViews are custom reports (or plugins) that allow the reporting and data-entry capabilities to be extended. These reports can interface with other corporate systems such as Deltek Costpoint®. Users can view and manipulate project data.

Home Pages — Project home pages provide all types of stakeholders with a project overview and can include real-time information such as project milestones and status. Home pages are easily created and managed using an integrated home page designer with standard templates for quick starts

Schedule Integration — Project contributors can update progress (project and non-working time) through a timesheet-style interface. New assignments and activities can be created and subsequently progressed. An authorization cycle gives project managers the option to review progress before the schedule is updated.

Flexible Views and Reporting — High-level program summaries and digital dashboards provide an early warning system for potential problems and keep executives up-to-date on the latest developments so timely decisions can be made.

Project Document Control — Team productivity is enhanced by having a centralized and accessible location for all project documents. Users can share and modify project documents in a controlled fashion that features version control, authorization cycles, audit trails, and “buy-in” features.

Portal — Customizable portal provides each user a personalized overview of all project information. My Portal displays an overview of projects, items, tasks, and pending progress that are relevant to the individual user. New items, notices, and assignments are highlighted for easy viewing. From the summary information, users can drill down into detailed screens.

Discussion Forums — Provides a real-time collaboration environment where all project team members can share ideas and discuss issues, both for particular projects and in specific knowledge areas.

Item Management — Project managers can log and track issues, risks, action items, and other project threats. Team members are presented a personalized, cross-project view of their responsibilities. WelcomHome makes it easy to create change orders as part of a formalized change process.

With fully customizable reporting, navigation, and integration, WelcomHome has the flexibility to fit the unique needs of any project based organization.

Deltek is a global leader dedicated to delivering enterprise management software that meets the unique needs of project-focused organizations. With over two decades of experience, Deltek enables companies to maximize profitability and productivity, integrating all aspects of their businesses. More than 11,000 customers worldwide rely on Deltek to streamline operations, improve performance and win more business.

SYSTEM SECURITY

Access to WelcomHome is closely controlled on a named user basis. Encrypted user information, support for Secure Socket Layer (SSL) across a network, and integration with other security systems such as LDAP or Active Directory all help to ensure both strict security of data and ease of administration.

APPLICATION SECURITY

Once logged in to WelcomHome, a role-based security system determines which types of information can be viewed and updated by individuals or groups. Users can inherit different roles across different projects. Users, groups, and roles are administered centrally through WelcomHome's Web-based interface.
