

RealNumber[®]

Drive Confidence and Trust in Toll-Free with RealNumber[®]

Enterprises want to reap the benefits of talking to customers directly. However, that means customers need to trust the number calling them enough to pick up the phone when an enterprise calls.

RealNumber is a powerful solution uniquely positioned to drive greater trust and confidence in voice calls.

Whether your enterprise customer is looking to achieve A-Level Attestation on outbound calls or in search of a solution that will protect their trusted business number from being used in fraudulent calls and illegal spoofing – RealNumber has you covered!

RIGHT TO USE

RealNumber delivers the data needed to inform a Certificate Authority (CA) of a customer's right to use a given Toll-Free Number (TFN).

STIR/SHAKEN COMPLIANT

OSP's can access the data associated with a specific TFN in a manner that follows the industry-standard STIR/SHAKEN framework.

A-LEVEL ATTESTATION

By helping enterprises achieve A-Level Attestation, Resp Orgs can strengthen their customer relationships while providing a value-added service.

DO NOT ORIGINATE (DNO)

Resp Orgs can identify TFNs as non-originating calls. Also, TFNs that are not in an active status have been pre-loaded and identified as DNO.
