RealNumber®
DO NOT ORIGINATE

Join the fight against fraud with RealNumber® Do Not Originate (DNO)

RealNumber® DNO is helping to bring back trust in telephony – one number at a time. And with its robust Toll-Free Number and 10-digit local number dataset, the solution has shown itself to be a powerful tool in protecting valuable number assets and the prevention of calls from spoofed numbers getting passed on to consumers.

Whether you're looking to access data fields for Toll-Free Numbers, local numbers – or both! – now is the perfect time to see firsthand how RealNumber DNO can help prevent fraud on your network.

HIGH CONFIDENCE
Relying on Service Providers to set DNO on their numbers provides the highest level of accuracy.

AUTO-SET DNO
Unassigned, spare, and disconnected numbers don't make phone calls. They are included in our data by default.

SUBSCRIBER-SET DNO
Many numbers are used for inbound calls only. Resp Orgs and Service Providers can identify these numbers as DNO directly in RealNumber to help subscribers quickly spot fraud.

DYNAMIC DNO
Resp Orgs can quickly set DNO for ALL numbers associated with their Resp Org ID.

TOLL-FREE AND LOCAL NUMBERS
The numbers don't lie – with a dataset of over 28M Toll-Free and 6B 10-digit local numbers (and growing!), the platform is a strong, trusted solution.

FLEXIBLE ACCESS
Access RealNumber DNO data via an API query or a flat file bulk download.
